

## SPE ELECTRICAL – INTRODUCTION

SPE Electrical Ltd. is a power system consultancy specialising in large LV, HV and EHV electrical systems. The company supports a wide range of organisations across several sectors, including: Renewable Energy, Transmission & Distribution, Built Environment, Oil & Gas, Industrial, Marine, Data Centres and Water.

As a power system consultancy, services can be broadly split into the categories of system design, system studies, earthing and general consultancy, supplying a wide range of technical services and knowledge to meet client requirements. Our team of highly specialist consultants has design experience from low voltage to 400kV and is also well versed in international design standards and practices such as IEC, ANSI, IEEE, NEC and NFPA.

All of SPE's Senior Consultants are highly experienced, degree qualified, chartered engineers who have worked with a wide range of technologies across a broad spectrum of industries. This gives SPE a huge breadth and depth of experience, and a unique ability to approach each project challenge from a number of different angles.

The company has an unswerving commitment to both quality and HSE, adopting a 'right first time' philosophy in everything it does. The Company's ethos is that this approach benefits its clients as well as SPE, as it reduces rework and project delays, improves overall satisfaction and helps lower costs.

At the heart of SPE's business strategy is the desire to work in a partnership approach to build long lasting relationships, which benefit both parties. This helps our Clients to streamline their business and reduce design costs and project delays by engaging with SPE early on. SPE operates with a simple but effective philosophy:

*"At SPE we believe that the best way to grow our business is by helping you grow your business."*

As well as providing consulting services for many large organisations, SPE provides support to Small and Medium Enterprises (SMEs), helping them achieve growth by allowing them to tackle bigger and more complex projects without the need to recruit additional specialist staff.
